

The Ins and Outs of the Autism Spectrum Disorder

It is often said, to know one person with Autism – is to know one person with Autism. People who attend this training will be able to identify the many presentations of Autism as well as how to locate and access treatment and supports for adults and children diagnosed with Autism.

During this presentation you will explore the diagnosis of Autism by breaking down the criteria listed in the DSM V. Side by side, we will discuss both the key features of the diagnosis and the implications this has when working with someone diagnosed with Autism. This presentation will also cover the differential diagnoses of Attention Deficit Disorder, Social Pragmatic Communication Disorder and Sensory Processing Disorder and how they can overlap with Autism.

The presentation will include the incorporation of the I/DD population into recovery services. Discussing the relevance of recovery for many members of this group, the accommodations that have been made, the accommodations that don't have to be made and the bureaucratic challenges in developing a program of this sort. There will be a panel discussion with our presenters and the audience.

Presenters:

Michele Koenig, LPC, LMFT of Rockland Jewish Family Service

Joe Zweig, PhD of Jawonio, Inc

Mary Hollander LMSW Jawano Inc
